S.3	Name of the cryptoasset	Solana		
S.4	Consensus Mechanism	Proof of Stake (PoS)		
S.5	Incentive Mechanisms and	A Proof-of-Stake (PoS) consensus mechanism		
	Applicable Fees	incentivizes validators to secure the network		
		and validate transactions by staking their own		
		crypto-assets as collateral. Validators are		
		selected to create new blocks based on the		
		amount of cryptocurrency they hold and are		
		willing to 'stake', rather than through		
		computational power. If validators act honestly, they earn rewards through transaction fees;		
		however, malicious behavior or proposing		
		invalid blocks can lead to a reduction of their		
		staked assets, creating an economic penalty		
		that discourages misconduct and ensures		
		network integrity.
